- Comprehensive information about New Jersey's vehicle inspection process

**BE A RESPONSIBLE
VEHICLE OWNER**

Taking care of your vehicle means a lot more than just getting an inspection sticker. Regular maintenance and better driving habits help improve the life of your vehicle and aid in keeping our roads safe.

Tip 05:
GET THE JUNK OUT OF YOUR TRUNK

Every 100 lbs. of cargo cuts gas mileage 2-3%.

Tip 17:
KNOW YOUR DUE DATE

New Jersey requires a biennial emissions-only inspection for passenger vehicles. Commercial vehicles are still required to pass mechanical defect and emissions testing. Check the sticker on your windshield to see when you're due.

Tip 06:
STOP IDLING

Idling gets 0 miles per gallon. So if you're sitting in place for more than two minutes, consider shutting the engine down. This will reduce pollution and save gallons of gas per week.

Tip 08:
GAUGE TIRE PRESSURE TWICE A MONTH

Over time, all tires lose pressure, compromising fuel efficiency and safety. Find out what your pressure should be by checking your owner's manual.

Tip 02:
THE WARNING LIGHT SECRET

A check engine light that stays on will fail inspection, and could signal serious engine trouble. But before you run to the mechanic, make sure that you don't just have a loose gas cap.

Tip 01:
SEE THE LIGHT ONCE A WEEK

A minor problem like a non-functioning light can be cause for unexpected tickets. Check blinkers, brake lights and headlights regularly.

VALUABLE TIPS, TO GO

Here are just a few of the ways to keep your car operating safely, environmentally-friendly, and at maximum fuel- (and money-saving) efficiency. For more great tips you can start using today, go to NJinspections.com and watch our short, entertaining videos. You'll be glad you did!
