

Provided by Distribution One and its partners, the new ERP/ WMS solution offers:

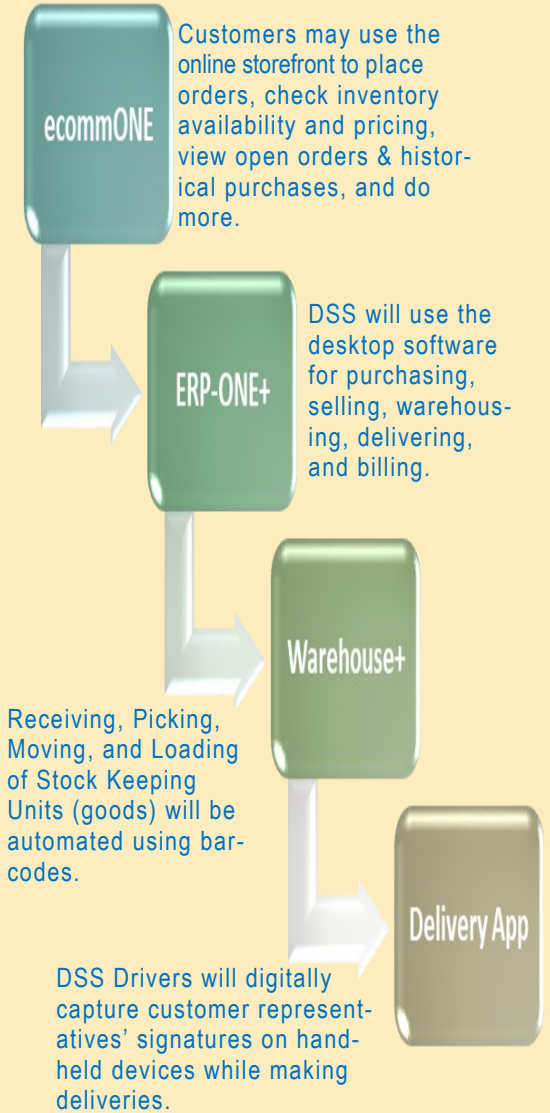

DSS is proud to announce that the implementation process is underway for the new Distribution and Support Services (DSS) Warehouse Management System/Enterprise Resource Planning solution, **with the GO-LIVE planned between January 5th and 7th, 2022**. The new system has tentatively been named NJ Supply Chain Solution (NJSCS).

This is a positive development for DSS and most importantly for the customers that we serve. DSS, like other government agencies, is first and foremost a customer service organization. Our service delivery, therefore, is critical to the success of customers' operations and fulfilling their orders for food and household commodities.

NJSCS's implementation is a significant part of DSS's long term efficiency improvement efforts. I am proud of Treasury and DPP support, as well as the DSS team for having come so far; implementing, testing, and cross-training one another, as well as DSS customers in this regard.

My team and I look forward to everyone's cooperation, positive contributions, as well as suggestions that may improve our service even further. We want to work with everyone to fulfill the DSS mission statement in a professional and ethical manner.

Dr. Ayman Alminawi; Chief of Operations

New Jersey Supply Chain Solution

The new Distribution and Support Services (DSS) Enterprise Resource Planning (ERP) & Warehouse Management System (WMS).
